Machine Learning and Data Mining

Publications

Bayesian active probabilistic classification for psychometric field estimation

Conjoint psychometric field estimation for bilateral audiometry

Kiron Sukesan

Software Development Manager at AWS

United States

Experience

Amazon Web Services (AWS)

3 years 3 months

Software Development Manager

August 2024 - Present (1 year 8 months)

DynamoDB Storage Node

Senior Software Engineer

January 2023 - August 2024 (1 year 8 months)

Seattle, Washington, United States

DynamoDB Storage Node API team

Compass

3 years

Senior Machine Learning Engineer

March 2021 - November 2022 (1 year 9 months)

Machine Learning Engineer II

December 2019 - March 2021 (1 year 4 months)

Amazon

2 years 2 months

Software Development Engineer II

July 2019 - November 2019 (5 months)

Software Development Engineer

October 2017 - July 2019 (1 year 10 months)

Greater Seattle Area

Washington University in St. Louis

1 year 4 months

Data Scientist

May 2016 - August 2017 (1 year 4 months)

St. Louis

Laboratory of Sensory Neuroscience and Neuroengineering

Lab of Dr. Dennis Barbour MD, PhD

• Researched a method to generate a user's Audiogram by uniquely utilizing Gaussian Process Classification. By considering the Audiogram's frequency-intensity space as a Bayesian probabilistic surface, clinical information is extracted more efficiently. This framework allows information gain and model uncertainty to be explicitly considered, enabling statistically informed adaptive sampling in the procedure. The method was further augmented to extract additional clinical information that is normally infeasible to measure. This information is thought to be informative of early stage hearing loss before hearing loss is detectable by standard metrics.

• Implemented and managed a web application that generates the user's Audiogram by utilizing the Gaussian Process classification technique. This web application has been used for ongoing research comparing machine learning audiology techniques to standard practice. The web application was designed to be highly scalable and was implemented using the .NET framework.

• Created novel hardware calibration algorithm using Machine Learning methodology.

Technologies Used: Java, Matlab, C#, .NET, HTML5 and Machine Learning Techniques

Lead Teacher's Assistant

August 2016 - December 2016 (5 months)

Greater St. Louis Area

Introduction to Machine Learning (Course 417T)

• Collaborated with two faculty members with grading, classroom instruction, coordinating other teaching assistants and other miscellaneous tasks.

• Oversaw the teacher assistant team, delegated responsibilities to teacher assistants, and coordinated the full grading process to ensure consistency across the board.

• Held classroom sized and individual tutoring sessions during office hours once a week for two hours.

Technologies Used: Matlab

Purnatva Solutions Pvt Ltd

Software Developer

September 2014 - August 2015 (1 year)

Bengaluru Area, India

• Participated and contributed to the development team of the Falcon Mobile App. App was implemented for large-scale deployment with currently over 10,000 active users. Implemented the map module that provides real time updates on bus position.
• Interfaced with the development team for www.vidyadhan.org, a portal that connects potential sponsors to qualified, yet underprivileged students. Website was developed using the LAMP stack.

Technologies Used: LAMP Stack, Linux, Apache, PHP, MySQL, Java, Javascript, and Bash Scripting

Washington University in St. Louis
Biomedical Engineer
August 2013 - May 2014 (10 months)

Department of Biomedical Engineering
• Designed and built a device that patients can wear to bed that records EEG data. Developed software and circuitry of the device.
• Collaborated with two other Biomedical Engineering students and two clinicians.

Technologies Used: Matlab, AutoCAD, Arduino and Raspberry Pi

University of Washington
Neurosurgery Summer Intern
June 2013 - August 2013 (3 months)
Seattle Washingotn

Dr. Jeff Ojemann's Brain Computer Interface Lab
• Created a signal analysis algorithm for electrocorticographical (ECoG) signals.
• Diagnosed and rectified electromagnetic noise problem that was corrupting ECoG signals.
• Constructed device that facilitated movement in a disabled patient’s hand based on theta wave activity.

Technologies Used: Matlab and Bash Scripting

Education

Washington University in St. Louis
Bachelor of Science (BS), Bioengineering and Biomedical Engineering

Washington University in St. Louis

Master of Science (MS), Computer Science
